

Guides

The **Guides** focuses on the basic documentation for envelope sender, registered users and administrators of an organization for the eSignAnyWhere product. Moreover, you can also find documentation for signers. It covers explanations of different electronic signature types and guides you through signing your first document.

In addition to the features offered by the graphical Web UI of eSignAnyWhere also the integration options, including the integration scenarios and integration stories, which show some typically integration use cases, are documented in detail in this chapter.
