

# v5 Use external signature image

This feature allows signers to upload their picture (custom signature picture) and add it as additional graphics to the stamp imprint. Furthermore signers can store the signature image within a gallery for later usage.

- [Preconditions](#)
  - [UI configuration](#)
    - [Image gallery](#)
  - [API configuration](#)

## Preconditions

≥21.31

 This is a non-default feature of eSignAnyWhere. If you are interested in this optional feature please [contact us](#). The feature flag "ExternalSignatureImage" is necessary.

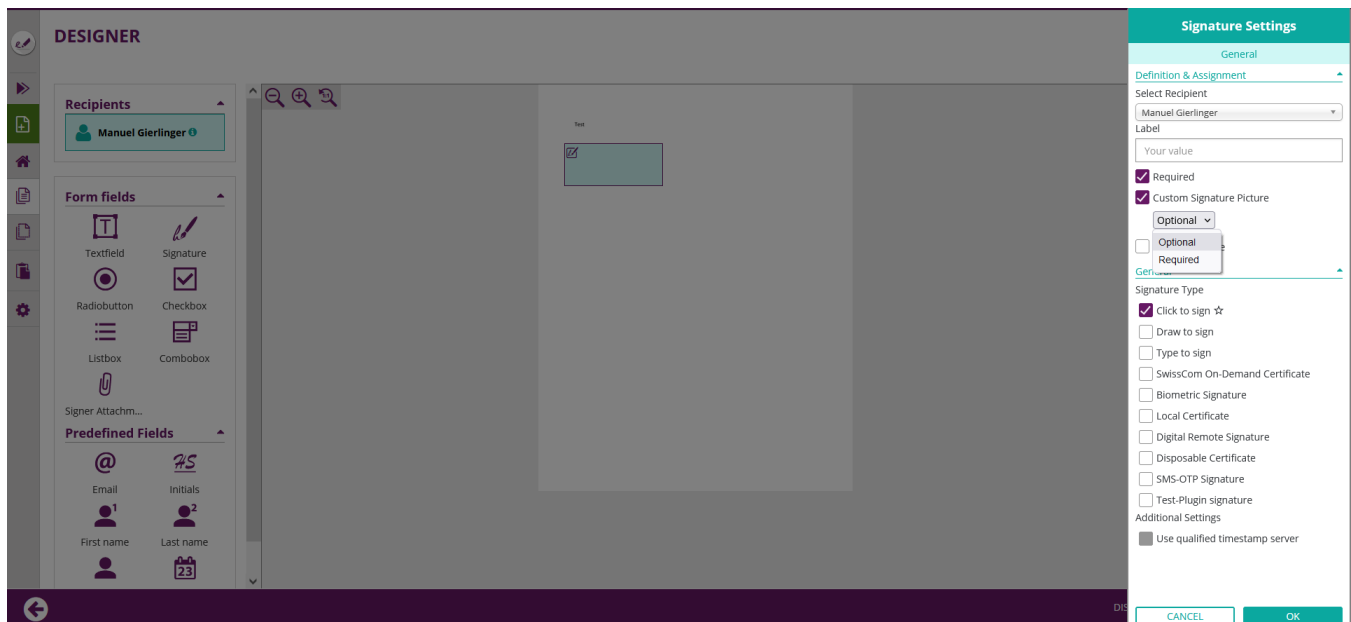

Please also note the following supported signature types:

- Click2Sign
- Draw2Sign
- Type2Sign
- Otp-Signature
- Local Certificate
- Namrial Remote Certificate
- Namrial Remote Disposable Certificate

The external signature image can be configured as optional, required or disabled.

## UI configuration

On the designer page you can select the "Custom Signature Picture" for the signature field to allow external signature pictures. Please see the next figure:

Before the signer can then use the external signature image, the Local Signature Image Stamp /Gallery must be enabled (can be found in the SawViewer in the settings). Please see the next figure:

# Settings

## Usage data & cookies

### General

Includes the computer name (used for licensing) and identifiers for accessing the SIGNificant Device Driver and the SIGNificant Kiosk Web Driver in remote desktop cases

### Signing device

Stores the selection for showing the 'native app available' information, the selection for redirecting automatically to the native app as well as the preferred signing device

### Signing mode

Saves the selection for 'use batch signing' (simple batch only), the preferred signature type and the recently used remote signature data (device id, user id)

Preferred signature type: -- None (ask every time) --

### Local Signature Image Stamp / Gallery

Stores images uploaded by the signer for the purpose to use custom images as signature image or signature background, stamping or hanko.

### Technically required cookies

Contains session information (session cookies)

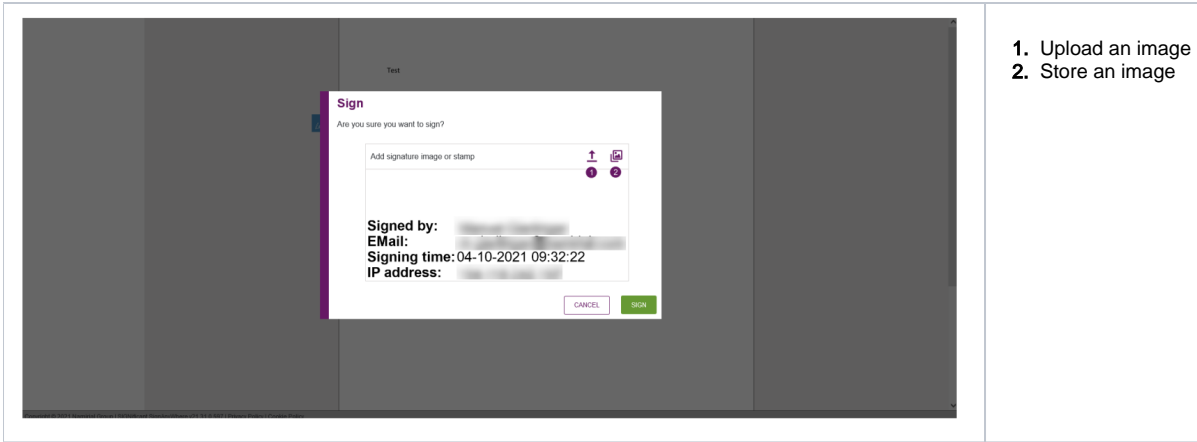

### RESET USAGE DATA

CANCEL

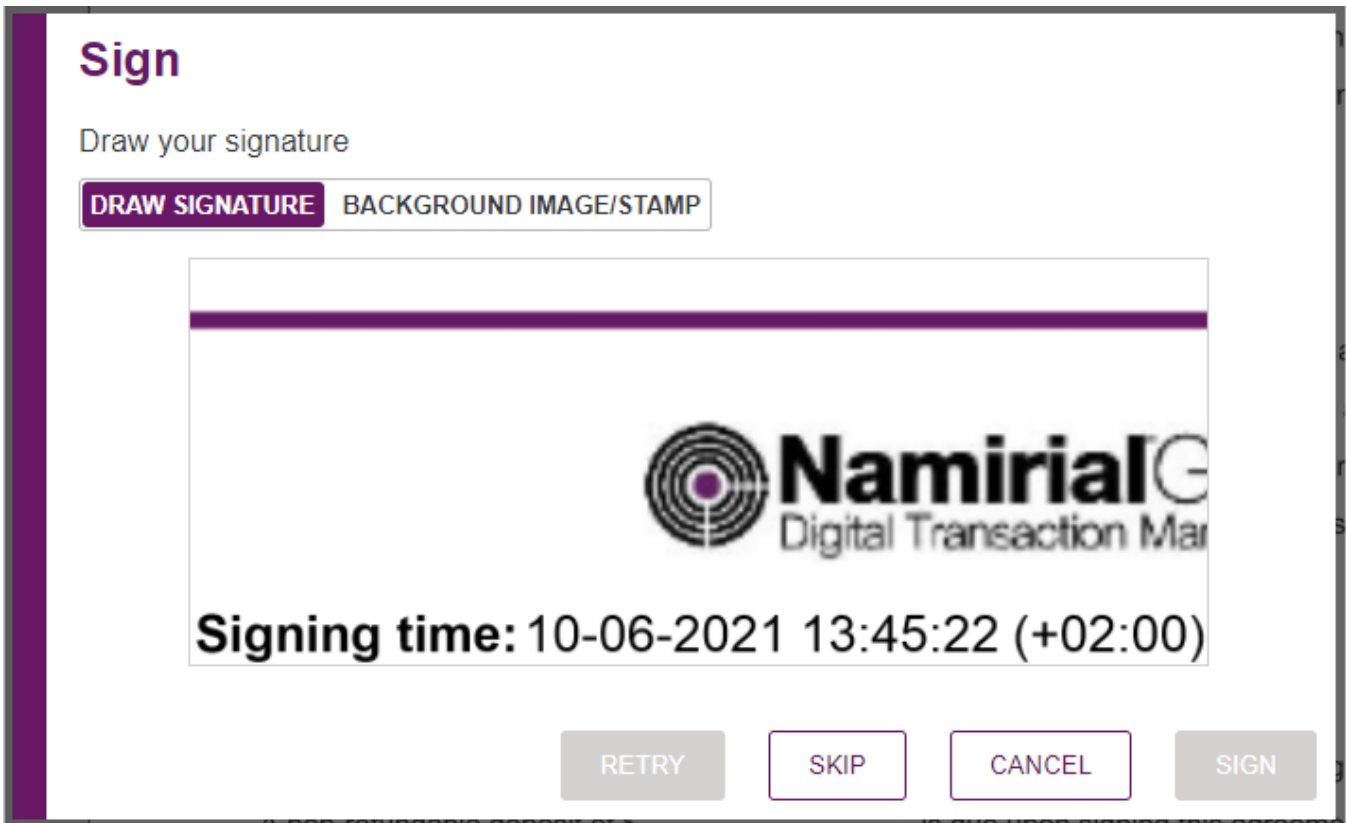

SAVE

If the sender allows the external signature image and the settings in the SawViewer are enabled the signer can see the following configurations:

Figure	Description
--------	-------------

Note: The Draw2Sign signature includes a new toggle to switch between drawing the signature and inserting the signature image.

## Image gallery

Allows uploading & removing uploaded signature images.

In case the workstep contains a signature image provided by eSignAnyWhere, this will also show up here.

## Image Gallery

Select image or stamp

### Image from local storage

Uploaded images may be accessible for other users on this device

CANCEL

## API configuration

To allow external signature images please add the following key value pair to the additional parameters:

```
{
  "Key": "useExternalSignatureImage",
  "Value": "Optional"
},
```

You can also find a complete configuration in the next collapse:

```
