## **SAML** Authentication Reference

## SAML Settings for Signer Authentication

0	The enhanced SAML support is available since: <b>v 3.2</b>
	<ul> <li>Before you start the configuration please have a look at the following sample for the federation metadata file and the authentication request file:</li> <li>Federation Metadata file</li> <li>Authentication Request file</li> </ul>
	Please note the following information (SaaS): Please make sure that the communication with your identity provider is not being blocked.

The settings for the signer authentication can be found in the section "Identity Providers". There you can add a provider for the SAML signer authentication. Just click on "Add Provider" to configure the settings.
